Description

The new 32-tone Vantage sounder is an exciting addition to the Vantage product range. With a wide range of operating frequencies from 440Hz to 2900Hz, all of these fully synchronised tones have been selected to comply with the latest sound patterns and frequencies used throughout the world.

All the standard Vantage features are retained, including the facility to select from three volume settings via the PCB mounted DIL switch. This allows individual sounders to be converted to high output devices where additional sound output is required.

Standard on all Vantage products is a universal locking system. Using an industry standard grub screw, Vantage products may be locked in place, making Vantage fully compliant with the latest requirements of British and European standards.

Quick fit installation is achieved by the bayonet fixing arrangement standard on both base variants. The deep mounting base offers ingress protection to IP65 and features a cover plate that is discarded for surface wiring and kept in place when wiring directly through into the rear of the product.
